1. Write a program to check whether a number is prime or not.
-->

```
#include <iostream>
using namespace std;

int prime(int num) {
    if (num <= 1) {
        cout << "No is not prime" << endl;
        return 0;
    }
    for (int i = 2; i <=num/2; i++) {
        if (num % i == 0) {
            cout << "No is not prime" << endl;
            return 0;
        }
    }
    cout << "No is prime" << endl;
}

int main() {
    int num;
    cout << "Enter the no.\n";
    cin >> num;
    prime(num);

    return 0;
}
```
